Main functions

Financial management

- Including accounting, financial reporting, budget management, and cost control functionalities.

Production management

- Planning and controlling the production process, including material requirements planning and resource allocation.

Inventory management

- Tracking and managing inventory levels.
- Creating material codes for inventories to establish a standardized and structured system for identifying and categorizing inventory items.

Project management

- Managing project schedules, resource allocation, and project costs.

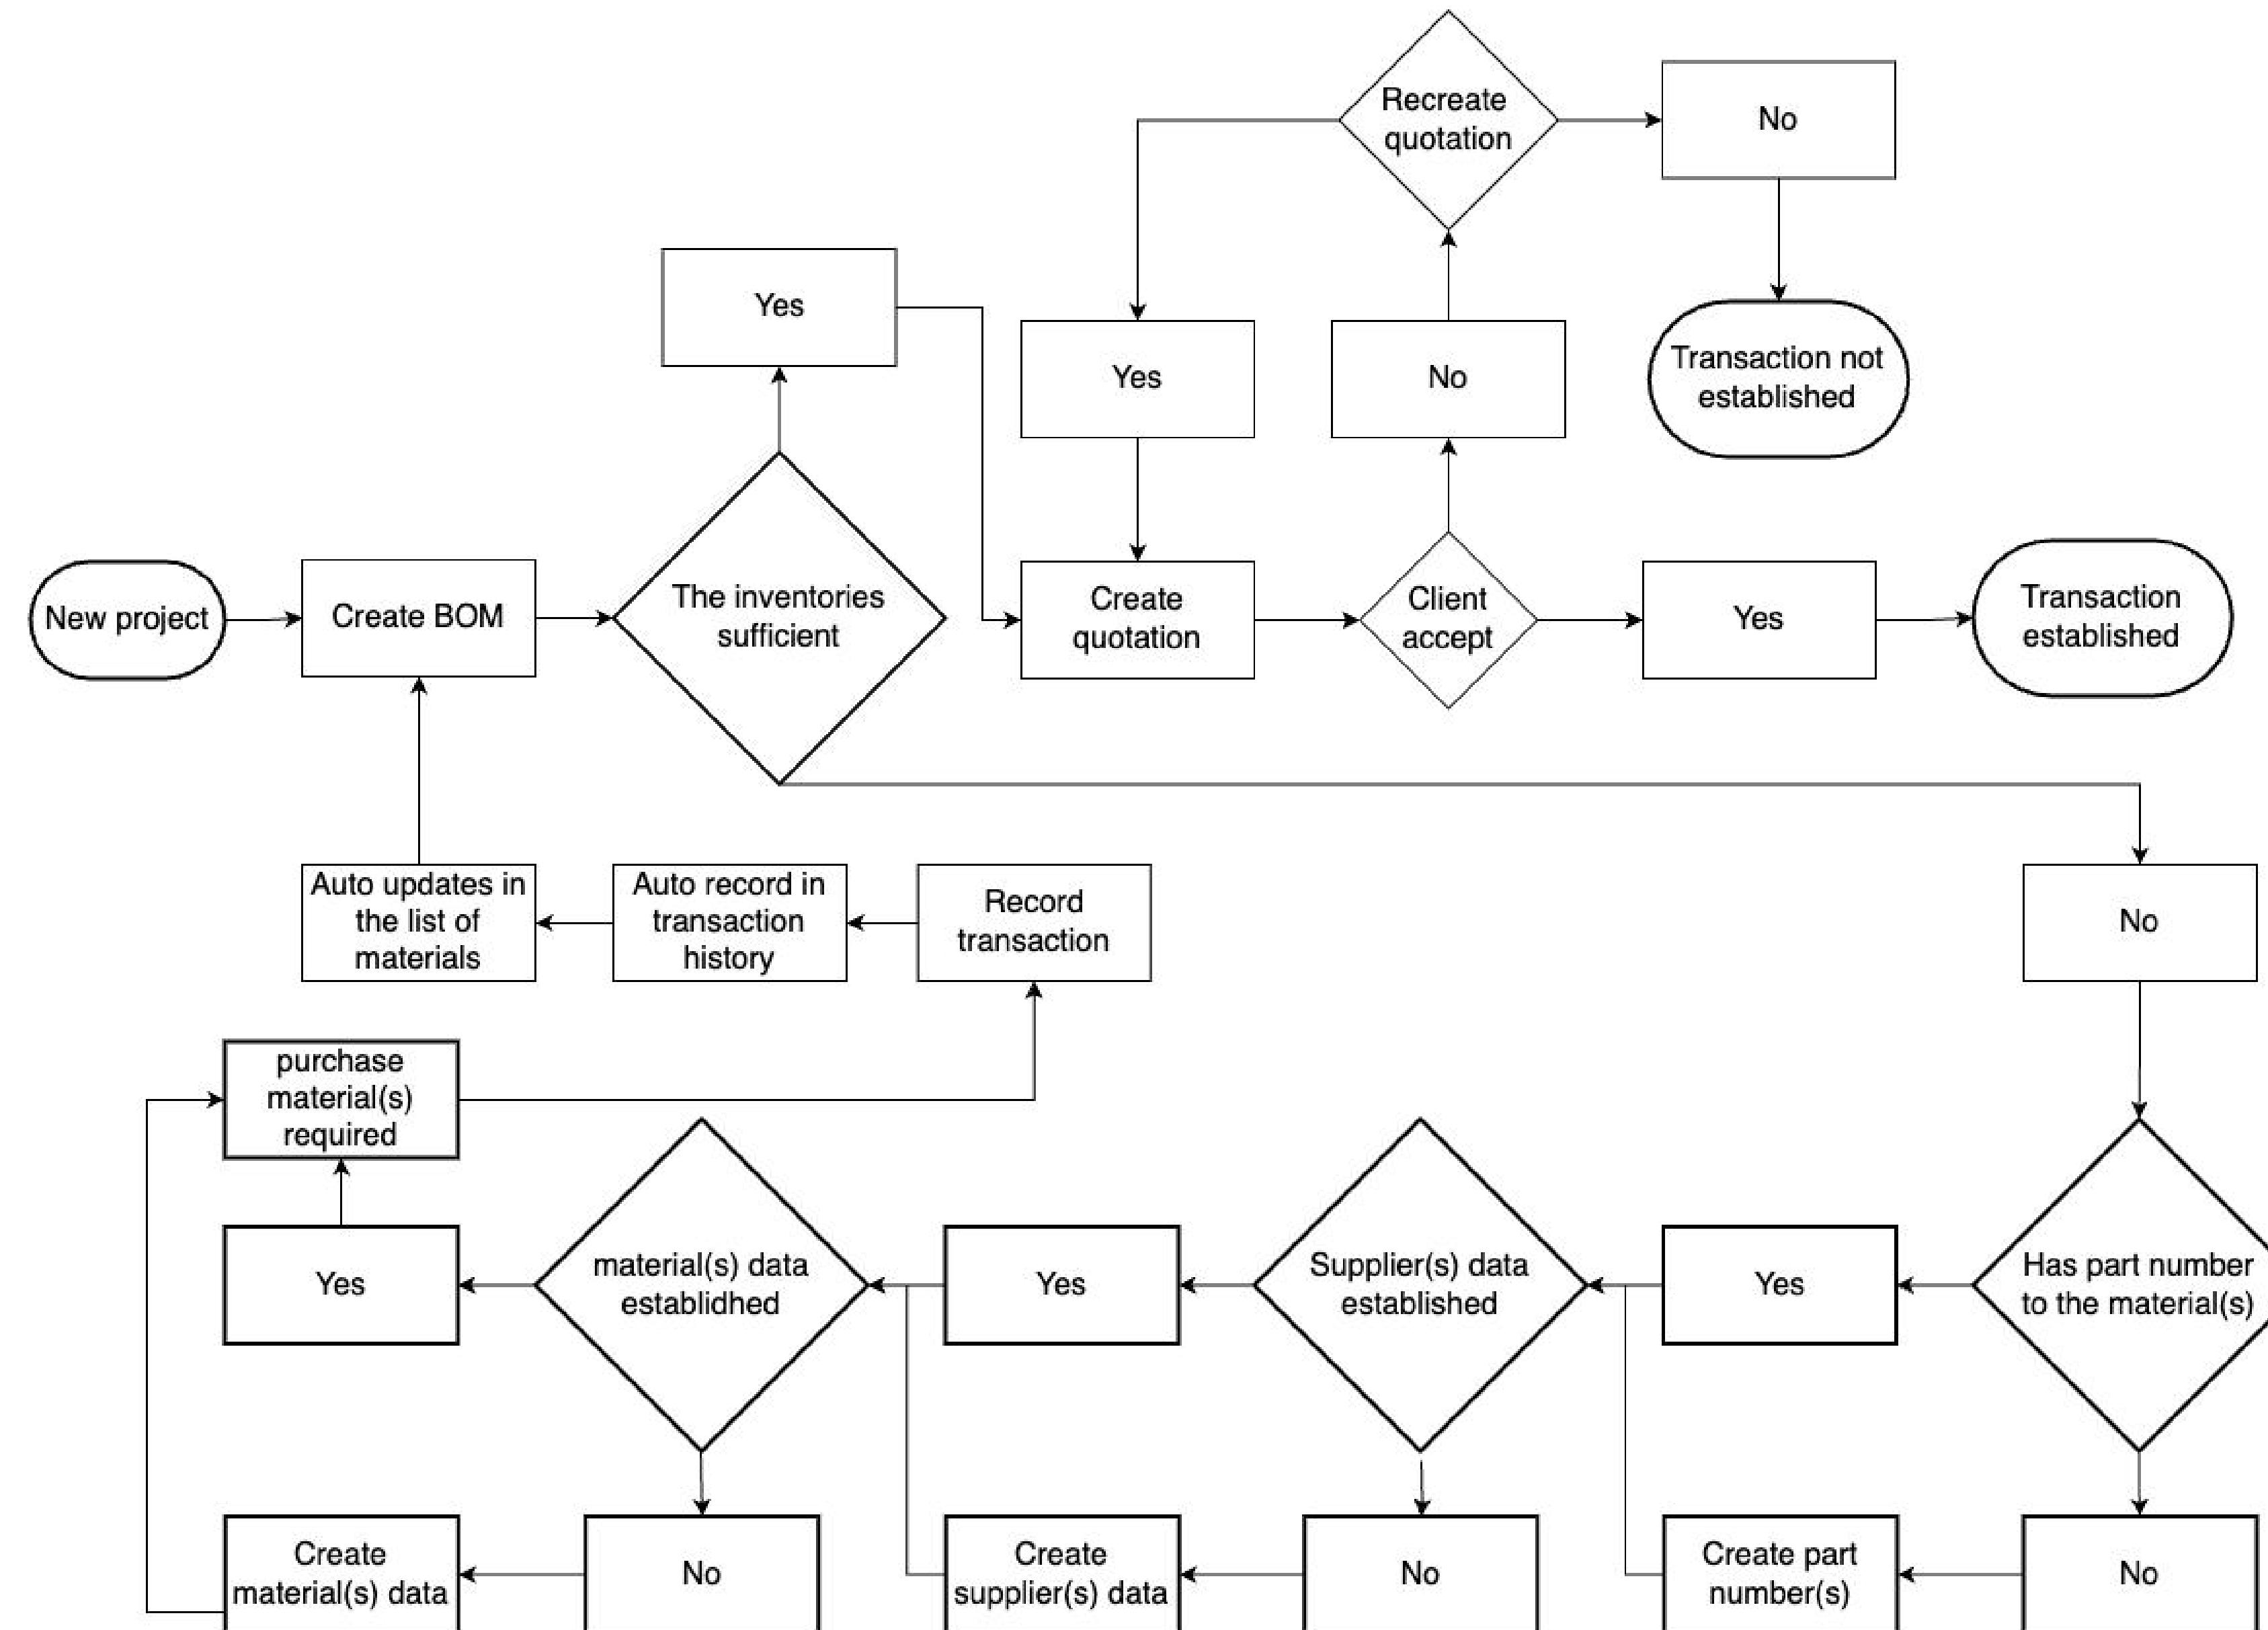

Purchasing management

- Managing the procurement process, including supplier selection, purchase orders, and supplier payments.

Customer and Supplier management

- Tracking customers and suppliers information.

Flow chart

Customers and Suppliers information

Customer and Supplier management

- Record customer and supplier data.
- Validate user-entered data before submission to ensure compliance with rules and prevent duplicates.
- Provide CRUD functionality.

The image shows a screenshot of a Customer and Supplier Management application interface. The top part displays a form for '廠商資料' (Supplier Information) with various input fields for company details like name, address, contact, and products. The bottom part shows a list of firms with a search bar and a detailed view of a selected firm's information. Red boxes and arrows highlight specific features:

- Search bar:** A red box highlights the search bar at the top of the list screen.
- List of firms:** A red box highlights the list of firms on the left side of the screen.
- Open update dialog:** A red box highlights the '更新' (Update) button in the top right corner of the detailed view, with an arrow pointing to it from the left.
- Open delete confirmation:** A red box highlights the '刪除' (Delete) button in the top right corner of the detailed view, with an arrow pointing to it from the right.

Materials classification

Inventory Management

- Manage (CRUD) part numbers help the company track the flow of materials in the supply chain. By assigning part numbers, the company can accurately identify each material and replenish inventory when needed, ensuring an adequate supply while avoiding overstock or stockouts.

Quality Control

- Part numbers enable precise identification and tracking of different materials. This helps ensure consistent product quality and facilitates quick traceability to specific material batches or suppliers in case of defects or issues.

Supply Chain Coordination

- In the supply chain, the company interact and collaborate with suppliers, manufacturers, and distributors. Using part numbers allows different trading partners to precisely identify and communicate specific materials, ensuring accuracy and consistency in orders and deliveries.

Cost Management

- Part numbers assist in better cost management. By assigning standardized numbers and tracking materials, the company can more easily analyze and compare prices and performance from different suppliers, enabling more informed procurement and sourcing decisions.

Efficiency Improvement

- The use of part numbers can enhance internal process efficiency. For example, in procurement and manufacturing, using part numbers simplifies the ordering process, reduces errors and confusion, and speeds up material sourcing and production schedules.

Material Management

Inventory management

- Record, track, and manage (CRUD) detailed information about materials, inventory levels, supplier information, and part numbers.

Upload / Download invoice

- Upload invoices before submitting material data for future downloading and viewing.
- Facilitate comparison of supplier price increases.
- Helps the accountant record purchase costs accurately and supports activities such as tax filings, cost calculations, and financial analysis.

The screenshot displays a Material Management system interface. On the left, a sidebar menu lists several options: 進銷庫存記錄 (Sales and Inventory Record), 歷史進銷查詢 (Historical Sales and Purchase Query), 物料清單 (Material List), BOM表 (BOM Table), **材料資料管理** (Material Data Management), 產品種類 (Product Type), and 廠商資料 (Supplier Information). The '材料資料管理' option is currently selected and highlighted in blue.

The main area contains two forms:

- 材料資料管理 (Material Data Management):** This form is used to input detailed material information. It includes fields for: 統編 (Serial Number), 公司名稱 (Company Name), 產品種類 (Product Type), 產品材質 (Product Material), 型號 (Model), 產品名稱 (Product Name), 電壓 (Voltage), 描述 (Description), 電流 (Current), 電率 (Frequency), 輸出功率 (Output Power), 規格 (Specification), and 特性 (Characteristics). A red box highlights the 'Upplad invoice' button, which is associated with the '上傳發票' (Upload Invoice) button in the top right corner of the form.
- 材料資料管理 (Material Data Management):** This form shows a list of material items. The columns include: 統編 (Serial Number), 公司名稱 (Company Name), 產品種類 (Product Type), 產品材質 (Product Material), 產品名稱 (Product Name), 管材口徑 (Piping Diameter), 管材名稱 (Piping Name), 產品料號 (Product Part Number), 型號 (Model), 描述 (Description), 電壓 (Voltage), 電流 (Current), 電率 (Frequency), 輸出功率 (Output Power), 規格 (Specification), and 特性 (Characteristics). A red box highlights the 'Download invoice' button, which is associated with the '下載發票' (Download Invoice) button in the top right corner of the list view. The list view also includes buttons for 表單 (Form), 更新 (Update), 重設 (Reset), and 刪除 (Delete).

At the bottom right of the interface, there is a page navigation bar with the text: 每頁筆數: 15 | 1-15 / 972 | < < > >|.

Bill of Material (BOM) / Quotation

Generate BOM or Quotation

- A Bill of Materials (BOM) is a comprehensive list of items, parts, assemblies, and materials required to produce or manufacture a specific finished product. It serves as a blueprint for creating the product.
- A quotation, also known as a quote, is a fixed-price proposal provided to a customer. It outlines the cost of a product or service and cannot be modified once the customer agrees.

The screenshot shows a software interface for managing BOM and Quotation. On the left, there is a sidebar with several buttons: 進銷庫存記錄, 歷史進銷查詢, 物料清單, BOM表 (highlighted in blue), 材料資料管理, 產品種類, and 廠商資料. The main area is titled '基本資料' (Basic Information). It contains fields for Project code (00001), Date (113/03/10), Client name (領先豐貿易有限公司), Contact person (張雋弘), Client phone (886 02 - 85223325), Project name (工程一), Project ID (12803855), and Client fax (02 - 85223323). Below this is a table titled '常用清單' (常用清單) and '自訂類別' (Custom Category). The table has columns for '產品種類' (Product Type) and '工具' (Tool). There are four rows in the table, each with a checkbox and a label: 变壓器 (Transformer), 電控材料 (Electrical Control Materials), and 工具 (Tools). A red box highlights the 'Basic information' and 'Header in the sheet' sections. A red arrow points from the 'Basic information' section to the client details. Another red arrow points from the 'Header in the sheet' section to the materials classification table.

Bill of Material (BOM) / Quotation

Data input reminders

- Only allow users to select materials with available inventory to avoid issues from insufficient stock.
- Provide inventory quantity alerts.
- Display an insufficient stock warning when the input quantity exceeds the material's inventory level.

Flexibility of data display and manipulation

- Real-time data synchronization in the form of instant data review and reduced errors.
- Instantly switch between BOM and Quotation form templates.
- Provide Excel export functionality for time-saving compilation.

Enhancement of managements

- **Financial management:** include budget management and cost control functionalities.
- **Production management:** plan the production process, including material requirements planning, production scheduling, and resource allocation.
- **Project management:** manage project schedules, resource allocation, and project costs.

Bill of Material (BOM) / Quotation

Provide search functionality

- Easily search BOM or Quotation by entering any search criteria.
- Ability to delete specified BOM or Quotation from the search results.
- Provide Excel export functionality.

The screenshot shows a search interface for BOM or Quotation. On the left, there is a search form with fields for '工程名稱' (Project Name), '編號' (Number), '客戶名稱' (Customer Name), '日期' (Date), '產品種類' (Product Type), and '產品名稱' (Product Name). A red box labeled 'Input keyword' points to the '工程名稱' field. A red box labeled 'Search' points to the '搜尋' (Search) button. At the top right, a red box labeled 'Open search dialog' points to the '搜尋' button in the header. On the right, a red box labeled 'View details' points to a '檢視' (View) button next to a '刪除' (Delete) button. The results table lists two entries:

	編號	表單名稱	統編	客戶名稱	工程名稱	Project code	日期

List of materials

Inventory management

- Track and manage (CRUD) inventory levels and supplier information for materials.
- Provide convenient search functionality for users to quickly find the requested material data.
- By leveraging recorded material data, the company could compare quotes from different suppliers and identify materials with the most competitive prices.
- Efficiently compare whether suppliers have adjusted prices.

The screenshot displays two views of a material management application. On the left, a sidebar menu lists various functions: 進銷庫存記錄, 歷史進銷查詢, 物料清單 (highlighted in blue), BOM表, 材料資料管理, 產品種類, and 廠商資料. On the right, the main area shows a 'Material List' (物料清單) for 'Copper Pipe - 2-1/8" - 90 Degree Bend 2-1/8"'. A red box highlights the 'Materials tree menu' (物料樹狀菜單) on the left side of the main window, which is a hierarchical list of material categories and sub-categories. Another red box highlights the 'Search field' (Search field) at the top of the main window, where the search term '管材' (Piping) has been entered. The main table lists five entries for the specified material, with columns for Date, Purchase Item, Reference, Company Name, Unit Price, Quantity, Discount, Tax, and Remarks.

2. Input sales data

Inventory management

- Based on purchase or sales records, automatically increase or decrease the inventory levels.

Transaction history

Transaction management

- Manage transaction details, including the ability to query or delete past orders and payment information.
- Offer a wide range of search criteria, such as time range, accounting period, transaction type, invoice number and project code.
- Using the project code as a search parameter allows for rapid retrieval of project-specific expenses and revenues to provide real-time visibility into the company's business operations.
